

Oil radish

# STINGER

Tillage radish

## Benefits:

---

- The strong radish roots leave holes in the soil - which increased the infiltration capacity of the soil
- Promotion of the air and gas balance of the soil
- Leafy and fast initial development for a good weed suppression
- **STINGER** delivers valuable humus for a biological activation of the soil
- Nutrients are preserved and protected against shifting into deeper soil layers
- Not winter hardy - well suited for conservation tillage
- Suitable variety for cover crop blends

Breeder: P. H. PETERSEN Saatzucht Lundsgaard GmbH, Version: 19.09.2017 / 13.00

**Usage:**

Green manure  
Ground water protection / Nitrogen conservation  
Mulch sowing  
Humus formation  
Protection against erosion

**Crop rotation suitability:**

+ suitable / ++ strongly recommended

Maize	++
Cereals	++
Oilseed rape	+
Sugar beets	
Potatoes	+
Intensive crops	+
Legumes	++

**Agronomic features:**

bad / early / short / low      good / late / long / high / tall

Weed suppression	7
Protection against erosion	6
Ground water protection / Nitrogen conservation	6
Humus formation	6
Cold- and frost resistance	4
Drought tolerance	6

Type of root	Tap root
Rooting depth	180 cm

**Cultivation recommendations:**

Recommended sowing rate	6 - 8 kg/ha
Sowing depth	2 - 3 cm
Sowing period	End of July until end of August - depending on location!
Fertilization	40 - 60 kg N/ha
Crop protection	Usually there is no plant protection required.
Sowing method	In order to gain a fast and even development of the oil radish plants, drilling after careful soil preparation is recommended.
